Product Description

STIHL KGA 770 Cordless Sweeping Machine

This easy-to-use, battery-powered sweeper for indoor or outdoor use features central height adjustment and downholder for detailed cleaning of a variety of surfaces.

The KGA 770 is an easy-to-use, battery-powered sweeper for indoor or outdoor use, featuring central height adjustment and downholder for detailed cleaning of a variety of surfaces. The KGA 770 is the only product of its kind on the market with an external battery. Once the AP 300 S battery is depleted after 3.5 hours of use, it can be swapped with a charged battery to extend the machine's run time—no need to plug in the machine to charge. This sweeper can pick up a wide variety of debris—from bottles and cans to leaves and rocks—which are stored in a space-saving storage bin that can hold up to approximately 10.5 gallons of material. Two washable foam filters reduce dust generated by the machine, allowing for a cleaner sweep and the ability to use the machine indoors and around outdoor areas such as pools without blowing around dust and debris. The KGA 770 also features an adjustable, ergonomic push bar which makes operating the machine comfortable and helps lessen operator fatigue.
