Product Description

STIHL TSA 300 STIHL Cutquik Battery Powered Cut-off Machine (Unit Only)

The TSA 300 STIHL Cutquik® is a battery-powered cut-off machine that is designed to be powerful, easy to handle, simple to use, and low maintenance.

The TSA 300 STIHL Cutquik® is a lightweight and compact battery-powered cut-off machine designed to cut deeper than a 12" TS 410 gas-powered cut-off machine. Because it is battery-powered, the TSA 300 STIHL Cutquik® is a low-noise machine with no exhaust emissions and reduced maintenance. The TSA 300 STIHL C Cutquik® is rated for wet cutting and features a quick connect hose adapter that automatically shuts off the water when the hose is disconnected. Features such as a variable-speed trigger for optimal control and a no-maintenance brushless motor, make this machine even more user-friendly.
